SELECTION GUIDE

INDUCTIVE POSITION SENSOR

Oilbirds navigate by echolocation. They produce a high-pitched clicking sound of around 2 kHz which is audible to humans. With the ability to transmit and receive information to sense their position, the oilbirds represent our inductive position sensors.

We offer state of the art inductive position sensor interfaces to address new challenges such as e-machines, e-brake booster and e-steering type of applications.

Inductive position sensing - primarily intended for standalone applications
